GENERAL CHARACTERISTIC

LU - 1404 - 2 is a product of oxidation of potato starch with sodium hypochlorite. It has better functional properties than potato starch. When boiled, aqueous solutions of LU - 1404 - 2 form transparent colloidal solutions with low viscosity which, once cooled, remain liquid or turn into relatively strong gels. Regardless of their concentration, pastes and gels based on LU - 1404 - 2 are not prone to retrogradation or syneresis. Owing to its low viscosity, the maximum concentration allowed for cooking is 15%.

It does not degrade in acidic solutions with a pH value of 4.

It is particularly recommended for the manufacture of jellies and soft gummies. It can be used as a substitute for gelatin. In lower concentration, LU – 1404 – 2 can be used for the manufacture of: salad sauces, vegetable sauces, sauces for canned meet or vegetables, soups, dressings, mayonnaise, fruit filling for confectionery goods, flavoured and thermised yoghurts, thermally-processed flavoured milk drinks, etc.
